## Exterior Window Perforated Material - Installation Instructions

What you'll need:

- Glass cleaner & rag
- Clean hands

*Large signs are easier to hang with 2 people...  
one to position top of the sign and one to pull the backing off.*

1. Clean the outside of the window thoroughly with glass cleaner. Make sure the window is completely dry.
2. Remove the backing off of the top third of the perforated material and apply to the outside of the window.
3. With the top third of the material applied to the window, pull the rest of the backing off of the material.
4. With the backing off, pull the remaining two thirds of the material away from the window. Press the material onto the window with your hands from top to bottom until the material is totally flat and smooth. If any imperfections occur, pull the material back a bit and repeat this step.

\*Temperature of the intended surface should be between 45 and 90 degrees Fahrenheit for best results
